Abstract. Nurse practitioners (NPs) provide many different types of healthcare services to older adults in a variety of settings. Depending on the state, nurse practitioners may work independently, but most often collaborate as a member of the interprofessional team. Studies of NP practice have consistently shown that NPs provide high-quality care,...

COVID-19 Resources. Reliable information about the coronavirus (COVID-19) is available from the World Health Organization (current situation, international travel). Numerous and frequently-updated resource results are available from this WorldCat.org search. OCLC's WebJunction has pulled together information and resources to assist library staff as they consider how to handle coronavirus ...

Listen to Dr. Thomas Osborne, co-author of *Using Technology to Improve Care of Older Adults* talk about the continued usage of older technologies, and how collaboration with current technology tools, as well as building efficient workflow, can present numerous benefits for the field of medicine and patient...

It was suggested that group practices in primary care foster collaboration with other health care providers, which encourages care co-ordination and leads to a higher quality of primary care [8]. Primarily, nurses were introduced in primary care practices to meet a perceived shortage of primary care physicians [15].

Yet active physician involvement in collaborative caregiving has been associated with improved patient outcomes in intensive care units, 46,47 other inpatient settings, 48 general clinic populations, 49 and residential treatment centers. 50 The level of physician interaction with nonphysician caregivers in the SCC intervention—introducing patients to nurses and social workers as clinician associates, staying in regular contact, having monthly meetings to assess patient status and revise ...
